Job Market Paper

“Opioid Use Disorder Treatment and Mortality: Evidence from Variation in Services Offered”.

Abstract: In this paper, I estimate the impact of substance abuse treatment facilities on the opioid related death rate and other outcomes that may be impacted by the opioid epidemic. Building on the existing literature, identifying variation comes from the opening and closing of treatment facilities at the county level. I exploit a new source of variation, variation across treatment facilities based on services offered and insurance type accepted. I find significant heterogeneity across treatment facilities. Treatment centers offering Medication Assisted Treatment and accepting Medicaid have a negative impact on the opioid related death rate while facilities not of that type do not have a statistically significant impact.
